

ALOSCA Technologies 2015 Product quick reference table.

ALOSCA Granular inoculants

Product type	Description		Comments
	Strain	Crop Type	
ALOSCA Granular 500kg & 25kg	GROUP G S	LUPIN (& SERRADELLA)	Dry granular legume inoculant. In-furrow application at 10kg/ha . Can be sown to dry or moist soil mixed with seed, fertiliser or standalone. Pack size & type: 500Kg double chuted bulk bag with four corner lifting loops, treats 50ha. Minimum order: 1 unit (500kg) Up to 3 per pallet. Pack size & type: 25Kg polypropylene bag Minimum order: 1 unit (25kg) 40 to pallet.
	GROUP C	SUB-CLOVER	
	GROUP BS	BISERRULA	
	GROUP F E	PEA/BEAN/VETCH	
	GROUP AM	MEDIC (Barrel & Burr)	
	GROUP AL	LUCERNE (& strand medic)	
	GROUP N	CHICKPEA	

General usage tips for ALOSCA Granular (see label for full instructions)

ALOSCA Granular is a dry, clay based in-furrow legume inoculant that can be sown into dry or moist soil conditions.

Keep dry during delivery, storage, handling and application.

ALOSCA® can be mixed/layered with fertiliser, seed or from a third box as long as it is delivered to the furrow in close proximity with the seed (deep or side banding not recommended).

For higher clay content soils it is recommended ALOSCA® products are mixed/layered in the seed box with the seed to ensure good seed contact and the full label rate be used.

Avoid over handling. Due to the friable nature of the product it is recommended to minimise machinery transfers (augers etc.) of product to the seed/fertiliser box.
